## *Relinquishment Granite Tor Tenement, Tasmania*

The Directors of Corona Minerals Ltd made application to Mineral Resources Tasmania that the Company relinquish Exploration Licence 25/2010 which comprises the Granite Tor Project.

Corona was principally targeting tin and tungsten mineralisation within the Granite Tor Project associated with the Devonian Granite Tor Pluton.

Exploration by Corona to date within EL25/2010 has focused on researching and generating anomalies worthy of follow up work with limited field work undertaken.

Even though Corona believes the area to contain several targets worthy of a detailed ground program, it was decided that funds budgeted for the area would be diverted to Corona's Queenstown project, and as such it was decided to relinquish the tenement.
